PROFESSIONAL SUMMARY

Full-Stack Developer with strong expertise in Artificial Intelligence and Generative AI engineering, specializing in Agentic Retrieval-Augmented Generation (RAG) systems, LLM integrations, and vector-based semantic search for intelligent, production-grade applications. Skilled in building scalable backend services using Spring Boot, Node.js, FastAPI, and Next.js, with hands-on experience in automated trading platforms and real-time exchange integrations enabling reliable, low-latency trade execution systems.

TECHNICAL SKILLS

- AI & Generative AI: Retrieval-Augmented Generation (RAG), RAG Pipelines, Large Language Models (LLMs), LangChain, Vector Databases, Embeddings, Model Context Protocol (MCP) Servers, Context Window Management
- Backend Technologies: Java, Spring Boot, NestJS, Node.js, REST APIs, WebSockets, Microservices
- Frontend Technologies: React.js, Next.js, JavaScript, TypeScript
- Database: MySQL, PostgreSQL, Redis
- Cloud & Infrastructure: Amazon S3, Tencent Cloud, Cloudflare R2, Docker
- Blockchain & Web3: Solana, Phantom Wallet, on-chain SOL payments, Claude API, MCP (Model Context Protocol)
- Tools & Platforms: Git, GitHub, VS Code, Eclipse, Postman

EXPERIENCE

String Metaverse

Full-Stack Developer

Jul 2025 – Present
Hyderabad, Telangana

- FansOnChain — AI-Powered Creator & Fan Platform (fansonchain.live) · 2025 – Present
 - Architected and shipped a full-stack creator-fan platform (Next.js + NestJS) featuring real-time live streaming, direct messaging, and on-chain SOL payments via Phantom Wallet — owning end-to-end system design and delivery.
 - Integrated AI agents using Claude API with MCP (Model Context Protocol) servers to automate creator engagement workflows and enable structured, auditable tool use with external services.
 - Built cloud media infrastructure on Tencent Cloud, Amazon S3, and Cloudflare R2 for low-latency streaming and cost-optimized video delivery at scale.
- Automated Trading Platform Development & Exchange Integrations — Built real-time multi-exchange order execution backend (Java, Node.js) with WebSocket price streaming across Binance, Deribit, and Aster.
- Real-Time Trading Systems & Execution Monitoring — Built WebSocket services for mark-price streaming, order lifecycle tracking, and account sync; shipped React.js/Next.js trade-monitoring dashboards.
- Multi-Exchange Trading Integration System — Built REST/WebSocket integrations for Binance, Deribit, and Aster covering order placement, tracking, price streaming, and trade reporting.

PROJECTS

- IntelliDocs AI — Agentic Document Intelligence Platform with Retrieval-Augmented Generation (RAG)
 - Architected and deployed a production-grade Agentic RAG pipeline for intelligent document question-answering, combining hybrid retrieval, semantic search, and intelligent query routing to deliver accurate, source-grounded responses.
 - Built a multi-format document processing pipeline supporting PDF, DOCX, and image-based inputs, integrating OCR (Optical Character Recognition) for reliable text extraction from scanned and image-based documents.
 - Designed scalable RAG pipelines using ChromaDB as the vector database and NVIDIA Embeddings for high-fidelity semantic representations, enabling fast, accurate, and context-aware document retrieval at scale.
 - Optimized end-to-end pipeline performance — retrieval latency, embedding generation, and query throughput — and deployed the system to production.

EDUCATION

Bachelor of Technology – Electronics and Communication Engineering

Balaji Institute of Technology and Science, Narsampet CGPA: 7.10

2024

CERTIFICATIONS

- Model Context Protocol: Advanced Topics — Anthropic
- Building with the Claude API — Anthropic
- Claude Code in Action — Anthropic
